COMPANY PROFILE • 2026

01.

A DECADE IN THE MAKING

Ten Years of Shaping Metal, Building Trust

A decade ago, Nora Paslanmaz ve Çelik started with a simple idea: metal should be shaped with precision, not just processed.

That idea became a capability. Piece by piece, we built out our production floor—laser cutting, plasma cutting, welded fabrication, CNC machining, cutting and bending—turning a focused operation into a full-spectrum manufacturing partner.

Ten years in, we're not slowing down. We're just getting started on a bigger stage: taking the precision, speed, and reliability we've built at home and putting it to work for clients across the globe.

www.norapaslanmazcelik.com

01

Precision as a Standard, Not a Promise

In metal manufacturing, the difference between good and great is measured in millimeters. We built our reputation on getting those millimeters right—every cut, every weld, every bend checked against the tolerances our clients depend on. It's not an extra step for us. It's the standard we hold ourselves to on every single order.

02

Built on Experience, Built for Growth

A decade of hands-on production experience taught us what manufacturers actually need: reliability, responsiveness, and a partner who understands their industry, not just their spec sheet. That experience is now the foundation for our next chapter—bringing the same standards that earned trust in the domestic market to clients across the globe.

03

A Partner, Not Just a Supplier

We work closely with every client to understand the application behind the order, because a part that's technically correct but doesn't fit the real-world use isn't a job well done. From first inquiry to final delivery, our team stays close to the process, so clients always know exactly what they're getting and when. This is how we work. This is why clients trust us.

02.

WE SHAPE METAL WITH PURPOSE

Precision Manufacturing, Built for the World

Iron, steel, and stainless steel are more than raw materials to us—they're the foundation of everything from industrial equipment to architectural structures. At Nora Paslanmaz ve Çelik, we take that foundation and shape it into exactly what our clients need, with the precision the job demands and the speed the market expects.

Our production floor brings together laser cutting, plasma cutting, welded fabrication, CNC machining, and cutting and bending—five core capabilities working in sync. That means fewer handoffs, tighter tolerances, and faster turnaround for every project that comes through our doors. Whether a client needs a single precision-cut component or a complete fabricated assembly, we handle it internally, start to finish.

03.

OUR CAPABILITIES

Every project starts with the right process. At Nora Paslanmaz ve Çelik, we bring together five core capabilities under one roof, giving clients a single, reliable source for iron, steel, and stainless steel manufacturing.

NORA

PASLANMAZ - ÇELİK

04.

LASER CUTTING

Precision Where It Matters Most

Laser cutting is where precision starts. At Nora Paslanmaz ve Çelik, our laser cutting line delivers clean, high-accuracy cuts on stainless steel, iron, and aluminum sheet, reducing production errors and giving clients parts that move straight to the next stage without rework.

Running around the clock, our laser cutting capability handles both single components and serial production, cutting turnaround times while keeping costs efficient for high-volume runs.

Cut-to Length Lines / Boy Kesme Hatları

Thickness Range / Kalınlık (min.- max.)	Maximum Width / Maksimum En	Length Range / Uzunluk (min.- max.)
0,30 - 0,80 mm	1500 mm	300 - 8,000 mm
1,00 - 16,0 mm	2000 mm	500 - 15,000 mm

05.

PLASMA CUTTING

Fast Cuts. Clean Lines. Low Waste.

Plasma cutting is where speed meets strength. At Nora Paslanmaz ve Çelik, our plasma cutting line handles steel and conductive non-ferrous metals up to 25 mm thick, delivering fast, low-waste cuts through an ionized-gas process built for both precision and volume.

This is the process our clients turn to when a project demands speed without sacrificing accuracy. Whether it's a single custom piece or a full production run, our plasma cutting capability keeps timelines tight and material waste low, so every project moves forward without delay.

PLASMA CUTTING SPECIFICATIONS

THICKNESS RANGE

Up to 25 mm

MATERIALS

Steel and conductive non-ferrous metals

Precision doesn't have to slow you down. It just has to be done right.

06.

CUTTING AND BENDING

Shaped to Spec. Every Time.

Cutting and bending is where flat material becomes functional form. At Nora Paslanmaz ve Çelik, our CNC press bending line forms sheet metal into profiles and angle sections across a range of thicknesses and tonnages, giving every project the exact geometry it calls for.

From structural components to custom profiles, our team combines CNC accuracy with hands-on production experience, so every bend holds its angle and every batch matches the last. It's the step that turns raw material into parts ready for assembly or installation.

CUTTING AND BENDING SPECIFICATIONS

GUILLOTINE SHEARING / GIYOTIN KESİM

THICKNESS RANGE / KALINLIK (min.- max.)	MAXIMUM WIDTH / MAKSİMUM EN	MAXIMUM LENGTH / MAKS. UZUNLUK
3,00 - 34,0 mm	6000 mm	6400 mm

Every angle, every dimension, exactly where it needs to be.

07.

WELDED FABRICATION

From Single Part to Full Assembly

Welded fabrication is where separate pieces become one finished structure. At Nora Paslanmaz ve Çelik, our team handles structural and custom welding across stainless steel, iron, aluminum, and carbon steel, taking projects from a single component all the way to a fully assembled piece.

Every weld is built to hold, both structurally and visually, whether it's a small custom bracket or a large-scale assembly. Our welders work across materials and project sizes, giving clients one team they can rely on for consistent quality from the first joint to the final piece.

One team, every joint, built to last.

08.

CNC MACHINING

Exact Size. Exact Finish.

CNC machining is the final step where a part becomes exact. At Nora Paslanmaz ve Çelik, our CNC capability covers turning, milling, drilling, and grinding, bringing every piece to its specified dimensions and the surface finish the application demands.

Computer-controlled precision supports consistent repeatability from part to part, minimizing variation and guesswork. Whether it's a single custom component or a full production run, our CNC machining line delivers the accuracy clients need before a part moves into assembly or final use.

CNC MACHINING CAPABILITIES

	TURNING
	MILLING
	DRILLING
	GRINDING

Precision that holds, part after part.

09.

MATERIALS WE WORK WITH

Stainless Steel Standards and Chemical Values

Material quality is the foundation of every part we produce. At Nora Paslanmaz ve Çelik, we work with internationally recognized stainless steel grades, each selected for the corrosion resistance, strength, and durability specific applications demand.

STAINLESS STEEL STANDARDS AND CHEMICAL COMPOSITION

NORA CODE	EN	ASTM / UNS	C (%)	Cr (%)	Ni (%)	Mo (%)
304	1.4301	304 / S30400	≤0.07	17.5–19.5	8.0–10.5	–
316	1.4401	316 / S31600	≤0.07	16.5–18.5	10.0–13.0	2.00–2.50
316L	1.4404	316L / S31603	≤0.030	16.5–18.5	10.0–13.0	2.00–2.50
430	1.4016	430 / S43000	≤0.080	16.0–18.0	–	–

Composition limits shown as mass %.

304

Excellent general-purpose corrosion resistance and formability, widely used in food, construction, and general industrial applications.

316 / 316L

Enhanced corrosion resistance from added molybdenum, suited to chemical, marine, and demanding environments where 304 may be insufficient. The lower carbon content of 316L reduces the risk of sensitization after welding.

430

A ferritic grade with good formability and moderate corrosion resistance, commonly used in decorative, appliance, and mildly corrosive applications.

10.

APPLICATIONS AND INDUSTRIES SERVED

Built for the Industries That Build Everything Else

Behind every finished part is an industry that depends on it working exactly as specified. At Nora Paslanmaz ve Çelik, our materials and processes support manufacturers across construction, industrial equipment, and recycling and shredder machinery—sectors where precision and durability aren't optional.

Recycling and shredder equipment, in particular, demands components that withstand repeated mechanical loads and abrasive material: wear-resistant parts, structurally sound assemblies, and precise dimensions that support reliable operation under demanding conditions. It's the kind of work our welded fabrication and CNC machining lines are built for.

CONSTRUCTION AND ARCHITECTURAL

Structural components and custom fabrication for building and infrastructure projects.

INDUSTRIAL EQUIPMENT MANUFACTURING

Precision parts and assemblies for machinery producers.

RECYCLING AND SHREDDER MACHINERY

Wear-resistant, durable components built for heavy mechanical loads.

Different industries. One standard of precision.

11.

PACKAGING AND DELIVERY

Protected From Our Floor to Yours

A precisely made part loses its value if it arrives damaged. At Nora Paslanmaz ve Çelik, every order is packaged with the same attention we put into producing it, using appropriate protection against moisture, impact, and handling risks from the moment it leaves our floor until it reaches the client.

Materials are secured, wrapped, and loaded for the realities of transport, whether the destination is across the country or across the world. Every shipment is checked before dispatch, so the order received matches the order prepared.
